EDUCATION

University of Toronto

Honours Bachelor of Science in Computer Science

GPA: 3.8 / 4.0

Relevant Coursework: Software Design (In Progress), Object Oriented Programming

Mississauga, ON

Expected June 2030

TECHNICAL SKILLS

Languages: Python, Java, SQL

Databases & Storage: MySQL, Microsoft Access, JSON, Relational Database Design (RDBMS)

Libraries & Frameworks: Streamlit, Tkinter, Matplotlib, NumPy

Developer Tools: Git, GitHub, VS Code, PyCharm, Microsoft Excel

TECHNICAL PROJECTS

Burnout Beacon | [GitHub](#)

May 2026 – August 2026

Tech Stack: Python, Streamlit, OOP, Time Series Analysis, JSON

- Engineered a full-stack analytical platform using Python and Streamlit to evaluate the correlation between task difficulty and daily sentiment, delivering automated diagnostic reports for proactive workload management.
- Designed a custom heuristic model that aggregates task completion, weight metrics, and mood scores to flag burnout patterns before productivity drops.
- Architected a lightweight JSON storage schema for seamless session state persistence, enabling structured CRUD operations and local data integrity without reliance on heavy database servers.
- Optimized data transformation pipelines with Pandas, processing multi-variable task logs into interactive Matplotlib trend visualizations for rapid diagnostic reviews.
- Implemented Role-Based Access Control (RBAC) across Manager and Employee portals to enforce strict data separation, streamlining task logging while maintaining executive oversight.

Wins 4 Boston | [GitHub](#)

June 2025 – September 2025

Tech Stack: Python, MySQL, Tkinter, Matplotlib

- Engineered a predictive sports analytics platform utilizing Python to forecast Boston Celtics match outcomes by modeling historical player efficiency ratings, workload metrics, and matchup statistics.
- Designed and executed an automated ETL pipeline to ingest, clean, and map raw external basketball database records into a normalized (3NF) MySQL relational schema.
- Developed custom statistical modeling algorithms that evaluate head-to-head performance variables to compute game win probabilities and output historical trend visualizations via Matplotlib.
- Optimized database query pipelines and GUI integration using Tkinter, executing complex SQL joins and aggregations to render real-time statistical breakdowns with minimal query latency.

GradeHub

Jan. 2025 – Feb. 2025

Tech Stack: Java, Microsoft Access, SQL, JDBC

- Built a Java-based student information system with a JDBC-integrated relational database, enforcing input validation and referential integrity for reliable multi-table record management across administrative and academic tracking.

LEADERSHIP & EXTRACURRICULARS

UTM Orientation Volunteer

Aug. 2026 – Sept. 2026

University of Toronto Mississauga — Co-Curricular Record (CCR) Recognized

- Guided incoming undergraduate students through university onboarding, campus resources, and academic transition workshops.
- Facilitated team-building activities and dynamic group discussions for incoming computer science and STEM cohorts.
